Solving Literal Equations — Set A — Answer Key

Type 1 One Step: Add or Subtract

1. Subtract y from both sides.

Answer: $x = 10 - y$

2. Subtract b from both sides.

Answer: $a = c - b$

3. Add n to both sides.

Answer: $m = p + n$

4. Add 4 to both sides.

Answer: $y = k + 4$

5. Subtract d from both sides.

Answer: $e = f - d$

6. Add s to both sides.

Answer: $t = r + s$

Type 2 One Step: Multiply or Divide

7. Divide both sides by l.

Answer: $w = \dfrac{A}{l}$

8. Divide both sides by B.

Answer: $h = \dfrac{V}{B}$

9. Divide both sides by m.

Answer: $a = \dfrac{F}{m}$

10. Divide both sides by π.

Answer: $d = \dfrac{C}{\pi}$

11. Multiply both sides by b.

Answer: $a = bc$

12. Multiply both sides by 4.

Answer: $y = 4k$

Type 3 Two Steps

13. Subtract b, then divide by a.

Answer: $x = \dfrac{c - b}{a}$

14. Subtract $2w$, then divide by 2.

Answer: $l = \dfrac{P - 2w}{2}$

15. Add 5, then divide by 3.

Answer: $x = \dfrac{y + 5}{3}$

16. Subtract $2x$ from both sides.

Answer: $y = 8 - 2x$

17. Subtract $5x$, then multiply both sides by -1.

Answer: $y = 5x - 10$

18. Add c, then divide by a.

Answer: $x = \dfrac{d+c}{a}$

Type 4 Parentheses

19. Divide by a, then subtract b.

Answer: $x = \dfrac{c}{a} - b$

20. Divide by 3, then subtract y.

Answer: $x = \dfrac{z}{3} - y$

21. Divide by 2, then add b.

Answer: $a = \dfrac{c}{2} + b$

22. Divide by k, then subtract n.

Answer: $m = \dfrac{p}{k} - n$

23. Divide by 4, then add y.

Answer: $x = \dfrac{t}{4} + y$

24. Divide by 2, then subtract 5.

Answer: $x = \dfrac{y}{2} - 5$

Type 5 Fractions and Formulas

25. Multiply by 2, then divide by h.

Answer: $b = \dfrac{2A}{h}$

26. Multiply by 2, then subtract y.

Answer: $x = 2m - y$

27. Divide both sides by 2π.

Answer: $r = \dfrac{C}{2\pi}$

28. Divide both sides by rt.

Answer: $P = \dfrac{I}{rt}$

29. Multiply by 2, then add 3.

Answer: $x = 2y + 3$

30. Divide both sides by lw.

Answer: $h = \dfrac{V}{lw}$
