Pairs of Lines & Angles — Notes — Answer Key

Watch the video and fill in each blank. Pause when you see "Your turn."

Name: _____ Date: _____

☞ *Video: Three ways two lines can relate*

Key Idea

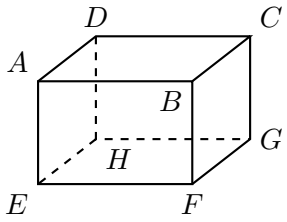

Intersecting — the lines meet in one point

Parallel — coplanar and **never** meet

Skew — **not coplanar** and never meet — only in 3D

☞ *Video: Look at a box*

Watch Me — Worked Example

$\overleftrightarrow{AB}$ and $\overleftrightarrow{DC}$ — **parallel**

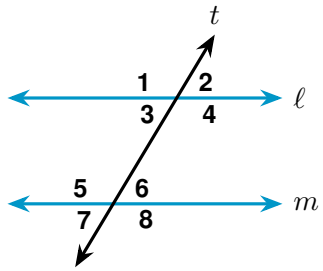

$\overleftrightarrow{AB}$ and $\overleftrightarrow{BF}$ — **intersecting**

$\overleftrightarrow{AB}$ and $\overleftrightarrow{CG}$ — **skew**

plane $ABCD$ and plane $EFGH$ — **parallel planes**

☞ *Video: A transversal makes 8 angles*

Key Idea

A **transversal** crosses two lines and makes 8 angles.

Interior: between the two lines (angles $3, 4, 5, 6$)

Exterior: outside the two lines (angles $1, 2, 7, 8$)

☞ *Video: Name the angle pairs*

Key Idea

Corresponding	same position	$\angle 1$ and $\angle$ 5
Alternate interior	inside, opposite sides	$\angle 4$ and $\angle$ 5
Alternate exterior	outside, opposite sides	$\angle 1$ and $\angle$ 8
Same-side interior	inside, same side	$\angle 3$ and $\angle$ 5

☞ *Video: Watch out*

Common Mistake

Two lines that never meet are not always parallel. If no plane contains both, they are **skew**.

☞ *Video: Your turn*

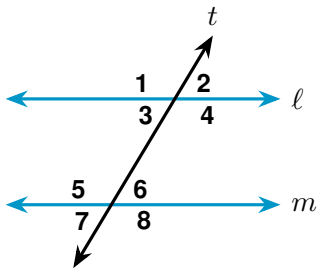

Your Turn

Name each pair.

(a) $\angle 2$ and $\angle 6$: **corresponding**

(b) $\angle 3$ and $\angle 6$: **alternate interior**

(c) $\angle 4$ and $\angle 6$: **same-side interior**

Notice

Remember: Lines can be **intersecting**, **parallel** or **skew**. A transversal makes 8 angles. Pairs: corresponding, alternate interior, alternate exterior, same-side interior.
