Pairs of Lines & Angles — Practice

A worked example comes before each type. Show your thinking.

Name: _____ Date: _____

Type 1 Parallel, Intersecting or Skew?

Watch Me — Worked Example

$\overleftrightarrow{EF}$ and $\overleftrightarrow{CG}$: they never meet, and no face holds both. **Answer: skew.**

$\overleftrightarrow{EF}$ and $\overleftrightarrow{HG}$: both on the bottom face, never meet. **Answer: parallel.**

Use the box above.

1. $\overleftrightarrow{AD}$ and $\overleftrightarrow{BC}$

2. $\overleftrightarrow{AE}$ and $\overleftrightarrow{EH}$

3. $\overleftrightarrow{AD}$ and $\overleftrightarrow{FG}$

4. $\overleftrightarrow{AE}$ and $\overleftrightarrow{DC}$

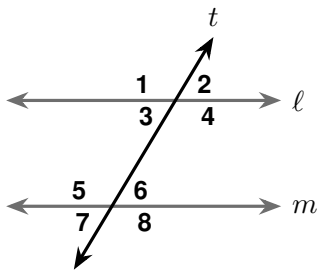

5. Name a plane parallel to plane $ABFE$.

6. Name all edges skew to $\overleftrightarrow{AB}$.

Type 2 Name the Angle Pair

Watch Me — Worked Example

$\angle 2$ and $\angle 7$: both **outside** the lines, on **opposite** sides of t. **Answer: alternate exterior.**

Ask two questions: inside or outside? same side or opposite sides?

Use the figure above. Name each pair.

7. $\angle 3$ and $\angle 7$

8. $\angle 3$ and $\angle 6$

9. $\angle 4$ and $\angle 6$

10. $\angle 2$ and $\angle 7$

11. $\angle 1$ and $\angle 4$

12. $\angle 5$ and $\angle 6$

Type 3 Find the Angle That Makes the Pair

Watch Me — Worked Example

Which angle is **alternate interior** with $\angle 6$? Inside, opposite side of t, at the other crossing: **Answer: $\angle 3$.**

13. Which angle corresponds to $\angle 4$?

14. Which angle is alternate exterior with $\angle 8$?

15. Which angle is same-side interior with $\angle 6$?

16. **HARD** True or false: skew lines can lie in the same plane. Explain.
